Name:_____ Date:_____

Protein Synthesis— Fill in the Blanks

Word Bank

protein synthesis DNA mRNA ribosome tRNA amino acids codon anticodon transcription translation

_____ is the process of making proteins in cells.

The instructions for protein synthesis are stored in _____.

_____ copies the DNA information into mRNA.

_____ carries genetic information from the nucleus to the ribosome.

_____ is the site of protein synthesis.

_____ brings amino acids to the ribosome.

A _____ is a group of three bases on mRNA.

The _____ matches the codon during translation.

_____ are linked together to form proteins.

_____ is the process where amino acids are assembled into proteins.
