Synthesis & Decomposition Reactions

SCH3U | Student laboratory assignment | 1 of 4

Prepare for your investigation

Name: _____ Date: _____ Class: _____

Research question

How can observations and balanced chemical equations be used to distinguish synthesis from decomposition reactions?

Learning goal: use the virtual model to gather evidence, explain synthesis & decomposition reactions and communicate a supported conclusion.

Materials: WorksheetGalaxy virtual laboratory, this assignment, calculator or spreadsheet if needed. Virtual observations only; do not recreate hazardous procedures or perform physical fitness tests without teacher approval.

1. Define two relevant scientific terms from the Background Information tab. (K/U)

2. Write a prediction or hypothesis with a scientific reason. (K/U, T/I)

3. Identify the variable or feature compared, the measured outcome and constants or consistent observation criteria. (T/I)

Synthesis & Decomposition Reactions

SCH3U | Student laboratory assignment | 2 of 4

Perform the virtual laboratory

Open the corresponding virtual lab and read Background Information. Follow the investigation instructions below. Record authentic simulated results; do not invent data.

• Complete at least three synthesis and three decomposition simulations.

• For each reaction, record its type, evidence, and balanced equation.

• Use the atom-count challenge to check conservation of atoms in two reactions.

• Compare reaction conditions and explain why an observed gas alone does not prove a particular product.

• Complete the formal report, including a hypothesis, observations, analysis, evaluation, and conclusion.

Record each completed observation using the simulator’s record control when available. Use Data & Graphs to review results. Export CSV if available; attach additional rows or screenshots when needed.

Record the exact settings and any changes to the method.

Synthesis & Decomposition Reactions

SCH3U | Student laboratory assignment | 3 of 4

Observations & results

Enter the actual results. Keep trial IDs consistent between continued tables. Attach the full exported data or extra sheets when the procedure requires more rows. Include units as displayed.

Data table 1

Trial / item	Reaction	Type	Condition	Observed evidence	Equation

Qualitative observations / sample calculation (show units where applicable)

Synthesis & Decomposition Reactions

SCH3U | Student laboratory assignment | 4 of 4

Analysis, conclusion & assessment

4. Present a labelled graph of a measured relationship, or an annotated diagram / comparison chart for qualitative investigations. Attach it separately. Explain the pattern using recorded evidence. (C, T/I)

5. Analysis: reaction evidence and conservation of mass (K/U, A)

6. Compare two contrasting observations from your investigation of Synthesis & Decomposition Reactions. Explain the difference using the background information. (K/U, A)

7. Use a specific recorded result to answer the research question. Explain the scientific reasoning behind it. (K/U, A)

Conclusion and evaluation: answer the research question, revisit the prediction using evidence, identify a model limitation and propose an improvement. (T/I, A)

Submit this assignment plus your completed Lab Report (printed or saved as PDF from the lab) and any supporting data/figures.

K/U: accurate concepts /10	T/I: method, data, reasoning /12	C: clear tables, units, report /8	A: explanation, conclusion, transfer /10

Total: /40
